

WHAT IS CLAIMED IS:

1. A communication terminal comprising:
 - a forwarding section forwarding incoming communication to a previously set forwarding destination; and
 - a forwarding control section receiving a forwarding start or forwarding prohibition order signal from a sending source of the communication, and causing said forwarding section to start forwarding of the communication or to prohibit the forwarding according to the order signal.
2. A communication terminal comprising:
 - a forwarding section forwarding incoming communication to a previously set forwarding destination;
 - a notice section responsive to reception of a call of the communication, transmitting a notice to the effect that the communication is forwarded, to a sending source of the communication before the communication is shifted to a talking state; and
 - a forwarding start section causing said forwarding section to execute forwarding of the communication after the notice is transmitted by said notice section.
3. The communication terminal according to claim 2, wherein said notice section transmits a notice utilizing short message service.
4. The communication terminal according to claim 2, wherein said notice section transmits a notice utilizing user to user service.
5. The communication terminal according to claim 2,

wherein said notice section transmits a notice utilizing electronic mail.

6. The communication terminal according to claim 1, wherein said forwarding section forwards communication by using call deflection service.

7. The communication terminal according to claim 2, wherein said forwarding section forwards communication by using call deflection service.

8. The communication terminal according to claim 1, wherein said forwarding section forwards communication by using call transfer service.

9. The communication terminal according to claim 2, wherein said forwarding section forwards communication by using call transfer service.

10. The communication terminal according to claim 1, wherein said forwarding section forwards communication by using "Call Forwarding No Reply."

11. The communication terminal according to claim 2, wherein said forwarding section forwards communication by using "Call Forwarding No Reply."

12. The communication terminal according to claim 1, further comprising a forwarding cease section, wherein

a time zone during which forwarding is effective is set in said forwarding cease section, and

when the time zone is over, said forwarding cease section prohibits said forwarding section from forwarding the communication.

13. The communication terminal according to claim 2,
further comprising a forwarding cease section, wherein
a time zone during which forwarding is effective is set
in said forwarding cease section, and
when the time zone is over, said forwarding cease section
prohibits said forwarding section from forwarding the
communication.
